FOREST AND PEOPLE: FROM SKYVIEW TO LOCAL DYNAMICS

Interdisciplinary workshop

23rd – 28th June 2024

CAES du CNRS - Centre Paul Langevin - 24 rue du Coin - 73500 Aussois

This interdisciplinary workshop brings together researchers from economics, human geography and remote sensing around a common research object, namely forests around the world with a special focus on developing countries. The workshop combines standard presentations with open slots to foster discussions on the drivers of forest cover change. From the global to the micro scale, the workshop emphasizes the importance of measurement and the complexity of human behaviour in relation to the environment. The workshop will put public policy in the spotlight by, among other things, discussing their effectiveness in reducing forest cover loss, by shedding light on potential spatial or temporal spillovers, or by questioning the appropriate scale and duration of public intervention.

Keynote speakers

Nancy Harris (World Resources Institute)

Andrea Nightingale (University of Oslo)

Erin Sills (NC State University)

Marie Weiss (EMMAH, INRAE)

This event is tied to the Agence Nationale de la Recherche funded projects GOLFOR-DEEPN (ANR-18-CE03-000) and PALMEXPAND (ANR-20-CE03-0004). It has also received support from Ecoles Universitaires de Recherche - Paris Graduate School of Economics, under the French government subsidy managed by the Agence Nationale de la Recherche (reference ANR-17-EURE-00). We thankfully acknowledge support from the EcoSocio department and the CLIMAE Metaprogram at INRAE. The event has also been funded by CNRS, CEPREMAP, GIS Asie and the OSE Chair at PSE.
